ABOUT US

For over 58 years, we have supplied and manufactured precure tread and consumables, which are required for the retreading process. We also assist the end user with a range of tyre management tools.

We currently have a wide range of consumables used in the retreading industry, which is continuously being updated to meet our customers' needs.

Our foundation is based on honesty, integrity and our world-class operations which apply best practices. We continuously strive to use innovative methods by making use of advanced technologies. Our customers always receive consistent quality, competitive prices and value-added services.

ADAPTORS, COUPLERS,
FITTING & O-RINGS

We carry an extensive selection of couplers and adaptors that are designed to help enable your ball valves and pressure gauges to work properly together.

A coupler is a very short pipe or tube that has a socket at one (or both) ends. This allows two pipes or tubes to be joined (or coupled), welded or soldered together. An adapter is used to convert the attributes of one device to another. For example, an electrical adapter will enable connections between sockets used in one region of the world with another

PATCHES

Patches for the repair of nail picks exclusively in the floor area for all types of radial and diagonal tires, together with any Leader filler material. They have a cushion rubber adhesion medium, which makes them patches that need the immediate application of heat for their vulcanization. They are easy to use and apply. When applying it, it is recommended to use Leader Rubber Company's Black Cement.

MATCHING GUIDE

Envelope Adaptors need to be checked continually for nicks or flat spots on the sealing ring edge. Use silicon spray once a week on couplers to avoid O-rings becoming brittle.
